

Open Jump Rings

1. Using two pairs of pliers (flat nose or chain nose), grab the jump ring on each side of the cut.

3. Separate the cut in the jump ring by moving one pair of pliers up and the other pair down.

4. After attaching the ring to your project, grab the jump ring with the two pairs of pliers on either side of the cut again. This time move the pliers in the opposite direction to close the jump ring.
